Technical Skills

Languages & Frameworks: Java, Python, C/C++, C#, JavaScript, Dart, Go, Julia, MATLAB, PHP, React, Node.js, Django, Flask, Flutter
Data & Cloud Technologies: PostgreSQL, MongoDB, SQL, Firebase, Google Cloud Platform, AWS, Docker, GitHub
Development Tools: Git, Linux, Android Studio, VSCode, Cursor, Postman, Unity, LaTeX, Nginx, Agile, Autodesk

Education

University of Alberta

Bachelor of Science in Computer Science

Edmonton, AB

September 2021 – August 2025

Work Experience

deenSTRONG Foundation

Calgary, AB

Software Developer Intern

May 2024 – August 2024

- Developed key backend features for a health and wellness mobile application using **Go** and **PostgreSQL**, enabling users to receive personalized advice.
- Engineered and integrated a **ChatGPT API** solution to deliver personalized diet and exercise recommendations, enhancing engagement and content customization.
- Contributed to the development and deployment of a web application showcasing a cryptocurrency whitepaper using **AWS** and **WordPress**.
- Assisted in testing and debugging to ensure a high-quality user experience.

C2 Conscious Customers

Edmonton, AB

Software Developer Intern

January 2024 – April 2024

- Built responsive user-facing features for a cross-platform mobile application using **Dart** and **Flutter**.
- Architected real-time synchronization of user inputs across web and mobile platforms using **Google Firebase Firestore**.
- Collaborated with team members using **Git** to organize changes and assign tasks.
- Used **Android Studio** to visualize and test the application on both **iOS** and **Android**.

Department of Civil and Environmental Engineering, University of Alberta

Edmonton, AB

Part-time Research Assistant

November 2024 – June 2025

- Developed automation scripts using **pyautocad** and **pyRevit** to streamline BIM workflows and data extraction processes.
- Implemented Python-based automation for repetitive tasks in AutoCAD and Revit, reducing manual processing time.
- Collaborated with researchers to analyze and manipulate BIM model data for construction and architectural research projects.

Projects

Optiver Realized Volatility Prediction | *Python, Jupyter Notebook, Git*

- Developed a machine learning model to predict short-term volatility for hundreds of stocks across different sectors.
- Conducted extensive feature engineering to improve accuracy.
- Trained and evaluated **LightGBM** and neural network models using cross-validation.
- Achieved root mean square percentage error as low as **0.22541**.

CatchTheCode | *Java, Kotlin, Android Studio, Firebase, Google Cloud Platform, Git*

- Designed and developed an Android application for scanning QR codes and competing with online users; integrated ZXing for QR detection.
- Implemented **Firebase** cloud storage for secure and scalable data handling.
- Integrated **Google Maps API** for location-based services to locate and track nearby codes in real time.
